Help: Can you instruct me on how I can send the resized photo by email? What do I put in those boxes?

For the email addresses, put your email address and the address where you want the resized image sent.

The message to the recipient is an optional field that lets you send a personalized message to the person you're sending the photo to.

The "password" field is a password that you create. In order to prevent abuse of the system, Resizr validates your email address before sending the photo out. By providing a password (and re-typing it to make sure you typed it right), resizr doesn't have to re-validate your email address every time you want to send a photo.
