

Help: I was sent an email recently with pictures imbedded into the email. Most of the pictures did not pop up. Instead, a box with "RESIZR.COM Image not available" is in each pictures place. It also states to come to this website to "find out how to host this image". Do you have any advice?

Resizr offers an option to allow people to send out URLs to images for posting on the internet. Resizr also offers an option to send an image via email. If you see the "RESIZR.COM Image not available" message, then the person who posted the image did not use the option to send via email or post on the internet. If those options are not used, then we delete the images periodically to save disk space. When the image is deleted, we display the message you are seeing.
